### Berrima - Map Display Area

Map 11 of 14

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Wingecarribee/Wollondilly Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act 1997*.

The **aim** of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The **objectives** of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Wingecarriebe/Wollondilly BFMC, covering the local government area(s) of Wingecarriebe and Wollondilly. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

## Review

Under the *Rural Fires Act 1997* this plan must be reviewed and updated within each successive five year period following the constitution of the BPMC. The Wingecarribee/Wollondilly BPMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BPMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

### Assets

This BFRMP identifies the assets that are considered by the Wincegaribee/Wollondilly BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFMC area identified as requiring treatments are listed in the assets table. Other assets within the BFMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number "NA" denotes non-spatial assets.

### Treatments

- Specific treatments assigned to assets in the Wengicebarbe/Wolondity area are listed in the treatments table and linked to the assets which they are designed to protect.
- Assets are defined as any plant or animal species (linked to a specific asset) which occur on an ongoing basis within the BFFC area are:
  - reviewing the bush fire prone land map;
  - assessing the equipment in the bush fire prone land comply with Planning for Bush Fire Protection;
  - using the Local Government Plans (LEPs) to control development in areas with a bush fire risk;
  - varying the standard bush fire danger period as required;
  - issuing permits during bush fire danger periods
  - prosecution of arsonists/offenders
  - investigation of bush fire causes
  - normal fire suppression activities;
  - assessing and managing compliance with strategic fire-fighting resource allocation management systems;
  - preparation of a S52 Operations Coordination Plan;

Note on LMZ: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression	Zone
<b>Asset Protection Zone</b>	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undefended assets.	As per RFS <a href="#">Suppression Strategy for Protected Zones</a> .
<b>Strategic Fire Advantage Zone</b>	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To add containment of wildfires to existing management boundaries.	To improve the likelihood and safe conduct of suppression strategies within the zone. <b>Parallel Attack</b> suppression strategies within the zone. and/or <b>Indirect Attack</b> (back burning) in high to very high fire weather conditions within the zone.  To reduce the likelihood of: Crown fire development within the zone. and/or Spot fire ignition from the zone.	Zone width related to suppression likelihood and dependant upon: - Topography - Aspect - Spotting propensity - Location of adjacent fire breaks - Mosaic pattern of treatment - Hazard Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this zone. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
<b>Land Management Zone</b>	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency.  To reduce the likelihood of spread of fires. To undertake mosaic burning.	As appropriate to achieve land management, e.g. heritage and/or fire protection e.g. broad scale strategic burning objectives.
<b>Fire Exclusion Zone</b>	To exclude bush fires.	N/A	Variable dependant on size of fire sensitive area requiring protection
